

Risk Assessments

Aztec Construction has developed a library of Generic Risk Assessments designed to minimise risk to health and safety during the normal course of work. The list is not exhaustive and may be upgraded during the progress of a project. All risk assessments are made site-specific after analysis of risk.

A general written assessment will be prepared for substances, processes, site health hazards etc. normally used or encountered on client's sites. This information is supplied to the client on site. Where necessary, specialists will be engaged to provide written assessments and advice on the precautions required with any substance where any risk to health is known or suspected and will carry out any sampling, analysis, monitoring etc. as required.

Assessments include:

Asbestos	COSHH
Confined Spaces	Slinging Loads
Confined Spaces	Disposal of fluorescent lights
Disc Cutters & Abrasive Wheels	Disposal of Waste Material
Driving company vehicles	Working with Solvents
Loading wagons	Fire on Site
Manual Handling	Permits to Work
Site Work	Ladders
MEWPs	Mobile Towers
Noise	Portable Electrical Equipment
Stepladders, Trestles & Staging	Hand Arm Vibration
Storage of Materials on Site	Temporary Electrical Supplies
Use of Skips	Use of Hand Tools
Working at Heights	Work by Water
